

Eurofins Food Testing

A comprehensive range of
state-of-the-art analytical techniques

Establish the safety, authenticity, origin, composition, purity & traceability of food

- ✓ Facilities across the UK
- ✓ A global network of laboratories
- ✓ Competence Centres
- ✓ Over 200,000 analytical methods
- ✓ UKAS (ISO 17025) accredited

Microbiology

Eurofins is one of the leading service providers for microbiological testing in the UK. Our food and water analytical portfolio covers pathogens such as *Salmonella* and *Listeria*, as well as spoilage and indicator organisms like *Staphylococcus aureus* or Coliforms.

We provide reliable, accurate results which show compliance with statutory requirements. Regular testing helps manufacturers and suppliers ensure that food and water are safe and hence protect the consumer. Eurofins has ongoing programmes for the development and accreditation of the latest technologies such

as rapid mould identification, detection of STEC *Escherichia coli* and *Yersinia enterocolitica*.

Nutritional

Eurofins offers an extensive range of nutritional testing from our UK facilities to assist food manufacturers and suppliers with:

- ✓ Compliance with retailer specifications
- ✓ Due diligence and quality control
- ✓ Surveillance studies
- ✓ New product development
- ✓ Compliance with food labelling legislation

Allergen, contaminants & residue testing

It's essential that comprehensive allergen and pesticide residue testing is carried out to ensure the safety of the food chain.

Our UK based labs offer a 3 to 5 day turnaround as standard to support your due diligence programmes and the option for same or next day reporting. Our labs cover many other important contaminants like Mycotoxins and Acrylamide.

Other areas of expertise

Vitamins

The Eurofins Vitamin Competence Centre in Denmark is dedicated to the analysis of vitamins and amino acids, offering a state-of-the-art service for our customers.

Speciation

Eurofins speciation tests are accredited for both qualitative and quantitative analysis using RT-PCR and DNA sequencing.
